SWEDISH FOUNDRY ASSOCIATION

THIS IS THE SWEDISH FOUNDRY ASSOCIATION

Because our large number of members, we can confidently assert that we speak for the industry. We are also seen as the foundry industry's obvious representatives in both the political arena and in the business world at large.

The overall objective of the association is to increase the use of cast components and ensure that the industry has a good profitability and sustainable growth. Our vision is for Sweden to have a world class foundry industry. The objectives and the vision is to become a reality through cooperation within the industry and with the help of strategic partners both in Sweden and internationally.

THIS IS WHAT WE DO FOR THE INDUSTRY

- We actively monitor our members' interests towards the authorities and politicians. The latest example is our successful lobbying efforts to retain the exemption of landfill tax on the sand and slag in Swedish foundries.
- The association will create and maintain different networks, both formal and informal within the industry.
- The association also has the task of promoting its members and represent the industry as a whole.
- We have, together with our partners in the Casting Innovation Centre, formed a long-term strategic research and innovation agenda. Within the framework of the CIC partnership, we have also several partners that provide competence development at various levels.
- The association is also working together with its member companies to influence the direction of industrial research. Along with Jernkontoret and Swedish aluminum, we run the Strategic Innovation program "Metallic Materials".
